

## Rules

Contest rules are being simplified this year, with variety being the main judging criterion. Construct a communications link, or an entire network, using as many different media types as possible.

### Example Scoring System:

10/100 Ethernet	0 points
Gigabit, 10base-2, or other obscure Ethernet	1/2 point
Non-ethernet (FDDI, Token Ring, RS232, etc)	1 point
Radio links using commercial hardware	1 point
Radio links using hardware of your own construction (kits are OK)	2 points
Free-space optical links (lenses, not fibers)	2 points
Acoustic couplers AND tin cans!	5 points

Each type only counts once, no matter how many times you use it. Absurdity is the name of the game! Previous entries involved acoustic couplers over VoIP connections, a robotic semaphore character recognition system, and a LEGO printer. Special consideration will be given to particularly complex or ridiculous setups. Remember: **YOUR CREATION MUST PASS DATA** to be judged! (There may be a prize for honorable meltdown.)

Please see

<http://www.notacon.org/>  
for all current contest rules.
